

ROLLERPACK

2651 product line

The rollerpack is a simple and proven mechanical marking device. It can easily be mounted over a conveyor belt. The device is driven by the forward movement of the product and in this way applies the label.

The pressing roller of the roller pack is equipped with TELOS rubber types, these can be manufactured to your specifications and are easily exchangeable.

The inking of the rubber types is performed with pre-inked or re-inkable ink rolls, which are available in different ink colours and qualities (dependent on the material to be printed).

Features:

- The roller pack can very easily be integrated in a conveyor belt.
- The device is driven by the forward movement of the product.
- Attachment from all sides is possible.
- Easy to exchange ink rollers for absorbent materials (paper, cardboard, etc.)
- Impression length: 430 mm
- Impression width: 25 - 100 mm

Printing plates:

- TELOS print types or block types
